

## Empowering Women for Sustainable Development: A Comprehensive Analysis of Education, Economic Inclusion, and Policy Initiatives in India

Dr. Darshana S. Rohit <sup>1\*</sup>

### ABSTRACT

The role of education, specifically female education, in the developmental process is well-documented, with economists from the classical period emphasizing this association. Beyond the social and economic advantages, female literacy is recognized as a catalyst for improving health and basic child care. Higher literacy rates are linked to lower poverty ratios globally. Despite significant improvements in literacy rates in India since independence, it still harbours the world's largest concentration of impoverished individuals. This study aims to test this phenomenon through the case of India. The socioeconomic impact of female education is a crucial area of research in international development. Regions experiencing an increase in female education often exhibit higher levels of overall development. Economic development is one facet of this impact, as women's education is shown to boost women's income and contribute to GDP growth. Social development is another dimension, with the education of girls yielding various benefits related to women's empowerment. The widespread belief that women's literacy is pivotal for development has shaped policies and programs of governments and international aid agencies globally. In the context of the poorest countries, the focus has shifted to bridging the gap between male and female literacy rates. Policymakers emphasize increasing women's access to literacy, particularly through programs tailored to their reproductive roles. Researchers are actively seeking statistical evidence to establish positive connections between female literacy rates and health indicators such as reduced child mortality and fertility rates.

**Keywords:** Female education, Development process, Social benefits, Economic benefits, Literacy rates, socioeconomic impact, GDP growth, Social development, Women's empowerment, Women's literacy

Investing in the education of girls yields significant returns, both at the individual and societal levels. A girl's education not only enhances her personal earning potential but also contributes to poverty reduction within her community. According to the World Bank, a year of secondary education for a girl is linked to a substantial 25% increase in wages later in life. The positive effects extend across generations, as educated girls tend to have fewer, healthier, and better-educated children. For each additional year of a mother's education, the average child gains an extra 0.32 years of education, with even more substantial benefits for

## **Empowering Women for Sustainable Development: A Comprehensive Analysis of Education, Economic Inclusion, and Policy Initiatives in India**

girls. The impact of enhanced literacy on women's earnings is evident, with highly literate working women in Pakistan earning 95% more than their counterparts with weak or no literacy skills. Educated women play a crucial economic role within their families and communities, reinvesting 90% of their earnings into their families. Investing in girls' education also contributes to delaying early marriage and parenthood. In sub-Saharan Africa and South and West Asia, if all girls had secondary education, child marriage would see a significant reduction of 64%. Moreover, at the societal level, an increase in educated girls leads to more female leaders, lower population growth, and a subsequent decrease in pressures related to climate change. The impact of girls' education on national economic growth is undeniable, with a one percentage point increase in female education correlating with a 0.3 percentage point rise in the average gross domestic product (GDP) and a 0.2 percentage point increase in annual GDP growth rates.

At UNICEF, the focus on educating girls, both at primary and secondary levels, is rooted in addressing the root causes of poverty. Beyond time spent in school, the acquisition of skills is crucial. UNICEF collaborates with governments to strengthen policies protecting girls from violence in schools, provides educational opportunities for vulnerable girls through various means, and advocates for girls' education globally. UNICEF proudly hosts the United Nations Girls' Education Initiative (UNGEI) and actively contributes to advancing the rights and achievements of girls through advocacy, partnerships, and the exchange of best practices. Investing in girls' education is not only morally right but also a strategic move for overall economic and social development. Collaborating with partners, UNICEF is actively working to set ambitious post-2015 targets for girls' education and gender equality in schooling. Leveraging the momentum from International Women's Day, there is a collective effort to chart a path forward that maximizes the transformative potential of girls' education.

The substantial impact of urbanization on women's education suggests that urbanization has been a positive force. Examining global trends in school enrolment ratios and literacy, it becomes evident that gender disparities persist, particularly in the developing world, except for certain countries in Latin America and the Caribbean. Girls' enrolment ratios consistently lag behind boys' across all levels of education, and adult men generally exhibit higher literacy rates worldwide. Despite educational advancements for both genders, the gender gap remains persistent. While education enhances labour market productivity and income growth for everyone, the positive effects of educating women extend beyond market measurements.

Increased education levels contribute to women's productivity in the household, leading to improvements in family health, child survival, and investments in children's human capital. The social benefits derived from women's education range from fostering economic growth to extending average life expectancy and enhancing the functioning of political processes.

In India, there is a renewed emphasis on literacy as a fundamental need, prompting significant investments in areas traditionally overlooked due to their perceived low return on investment. The government's initiatives, such as increased enrollment, retention, and achievements in primary education, coupled with extensive Total Literacy Campaigns, have shifted attention away from entrenched structural issues like gender bias across the education-employment matrix and the gendered nature of the ideological framework in educational provision. The current focus on literacy, however, raises questions about the type and relevance of literacy being promoted and the rationale behind the slogan "basic education as a basic human need." It is argued that merely producing literate women does not guarantee their ability to articulate

## **Empowering Women for Sustainable Development: A Comprehensive Analysis of Education, Economic Inclusion, and Policy Initiatives in India**

needs or participate in planning and decision-making. In the absence of addressing broader issues like women's socioeconomic status, labour market inequalities, and legal biases, literacy programs, in their limited form, serve as a relatively inexpensive and politically expedient solution.

Unlocking the potential of women and girls can have a profound impact on economic growth. The 20th century witnessed transformative changes in many countries as women extended their education and joined the workforce in larger numbers, particularly in office-based roles. This shift not only broadens the labour pool but also contributes to increased economic growth through enhanced productivity and higher incomes.

### **DISCUSSION:**

Women, constituting nearly half of the global population, play a pivotal role in the micro unit of a nation's economy, i.e., households. Educating women emerges as a key strategy for improving health, nutrition, and economic status within households. The lack of women's education can be viewed as a hindrance to a country's economic development. In the Indian context, the gender disparity in education is evident, with women achieving significantly lower educational levels than men.

Government and voluntary organizations have made concerted efforts to enhance women's education in India, reflected in policy changes and infrastructural support at various education levels. Despite progress, challenges persist, such as the rural-urban literacy gap and the negative impact of drop-out rates on women's education. Urbanization, however, has played a beneficial role in advancing women's education. While government initiatives and investments have improved facilities in schools, addressing infrastructural barriers is an ongoing need.

The study emphasizes that efforts have been made to encourage girls' attendance in schools, contributing to higher literacy rates in the future. However, infrastructural barriers remain, necessitating a focused approach to enhance women-centric educational infrastructure, reduce drop-out rates, and improve female literacy levels in India.

Although the Indian government expresses a commitment to education for all, the country still grapples with one of the lowest female literacy rates in Asia. Over 200 million illiterate women in India pose challenges not only to the women's lives but also to their families and the country's economic development. Studies highlight the adverse effects of women's illiteracy, including high fertility rates, mortality, poor nutritional status, low earning potential, and limited autonomy within households.

While women, especially in low-income strata, contribute significantly to various economic activities, there is a tendency to underestimate their economic roles. Modernization has brought economic opportunities but also led to a decline in traditional income sources for women, particularly those engaged in handmade and homemade items. Agricultural sector changes, such as mechanization, have displaced small producers, impacting both men and women. Urban migration has led to increased female participation in low-level or unskilled jobs in urban centres and an increase in female-headed households, particularly in low-income strata.

Recognizing the disadvantaged position of female heads of households, the discussion emphasizes the importance of combating poverty among low-income women. The economic crisis of the 1980s in Latin America exacerbated the challenges faced by women, with fewer

## **Empowering Women for Sustainable Development: A Comprehensive Analysis of Education, Economic Inclusion, and Policy Initiatives in India**

income-generating opportunities and reduced access to social services. The discussion calls for recognizing women's current and potential contributions as producers, decision-makers, and income generators. The focus should be on addressing the needs of poor women in both rural and urban areas, with a commitment to supporting national efforts for the effective participation of women in development.

### **RESULTS:**

Aligned with its overarching goals of fostering social and economic development, the Bank, through its lending and technical cooperation programs, is dedicated to supporting member countries in achieving greater integration of women throughout the development process, ultimately enhancing their socioeconomic standing.

#### **The Bank's commitment extends to initiatives aimed at:**

Recognizing and elevating the actual and potential roles of women in productive and social activities, emphasizing their contribution to national development. Facilitating women's access to productive resources, services, and the social and economic benefits derived from Bank operations. Alleviating social, legal, and economic constraints that hinder women's effective participation in and benefit from development-oriented programs. Enhancing the effectiveness of institutions responsible for fostering women's social and economic participation in the development process.

A core objective of the Bank's operations is to increase job opportunities and elevate the income levels of project participants. Given that women often shoulder economic responsibilities but are concentrated in low-productivity and low-paid roles, the Bank is committed to supporting efforts that generate employment, enhance women's productivity, and facilitate their access to productive employment or other income-earning activities.

Consistent with the criteria outlined in the Urban and Rural Development Policies (OP-751 and OP-752), the Bank will collaborate to augment both the financing and management of small enterprises, with a specific focus on mobilizing the efforts of women entrepreneurs. Recognizing that employment generation for women involves not only training and skills acquisition but also addresses family and household responsibilities, the Bank advocates for existing or new programs and incentives. These may encompass financing child day-care centres or project-related arrangements to aid women in managing their childcare responsibilities. Moreover, the Bank supports special employment programs offering flexible schedules, acknowledging the daily and seasonal burdens of domestic and productive tasks on women.

In conclusion, the Bank remains steadfast in its commitment to gender-inclusive development, supporting initiatives that empower women and promote their active and meaningful participation in the socioeconomic landscape.

### **EDUCATION, TRAINING, AND EXTENSION:**

In ensuring the full benefit of project-related training programs for women, the Bank will prioritize training initiatives in any sector that encourages women's participation, skill enhancement, and the realization of their productive potential. Recognizing the unique factors influencing the availability and effectiveness of educational and training programs for women

## **Empowering Women for Sustainable Development: A Comprehensive Analysis of Education, Economic Inclusion, and Policy Initiatives in India**

in rural and urban areas—such as the location of training centers, course hours' convenience, and the relevance of curricula—the Bank commits to:

- a) Supporting the development and establishment of extension programs, technical and vocational centres, formal and non-formal educational programs, and literacy campaigns tailored to facilitate women's access. Additionally, active promotional and outreach efforts will disseminate information on these courses.
- b) Establishing training courses for technical personnel to sensitize them to women's specific educational needs and challenges, thereby increasing their capacity to implement suitable plans and projects.
- c) Initiatives to increase the number of female extension agents.
- d) Identifying and eliminating barriers to women's participation in project-related training programs.
- e) Supporting training programs related to the maintenance and administration of project-related facilities.

### **CREDIT:**

A primary challenge for low-income groups, especially women, is insufficient financing. Access to credit is pivotal for improving living standards and enhancing productivity for small farmers and entrepreneurs in rural and urban areas. However, women's involvement in formal credit programs faces various obstacles, including legal barriers, complex application processes, high opportunity and transaction costs, socio-cultural constraints, and the absence of secure property titles.

In urban settings, women encounter similar challenges when attempting to establish or expand their enterprises and self-employment opportunities, often resorting to informal, high-cost credit sources. Hence, the World Bank places special emphasis on its credit programs to support mechanisms facilitating women's access to credit, ultimately boosting their productivity, either individually or through organized groups. These supportive measures include:

- a) Providing appropriate training for employees of formal credit institutions.
- b) Backing financial extension services specifically designed to reach potential female borrowers.
- c) The enhancement of intermediary credit institutions and associations, including formal or informal savings cooperatives where women predominantly participate. This involves active outreach and promotional efforts to inform women about the availability of credit programs.
- d) Implementation of measures aimed at removing or alleviating legal or other hindrances to ensure equitable treatment for women when seeking credit.

### **TECHNICAL COOPERATION:**

Within its technical cooperation operations, the Bank is committed to supporting the enhancement of the effectiveness of national and local institutions, along with their legal

## **Empowering Women for Sustainable Development: A Comprehensive Analysis of Education, Economic Inclusion, and Policy Initiatives in India**

frameworks. This support aims to formulate, coordinate, and implement equitable policies, programs, and projects that foster the social and economic participation of women, ultimately improving their societal status. The Bank will actively contribute to training initiatives and institution strengthening to implement resulting reforms or policies, emphasizing the dissemination of information related to such reforms.

Special attention will be given to training programs designed to enhance the administrative and entrepreneurial skills of women, particularly female entrepreneurs and those employed by formal institutions in areas such as extension work, project identification, preparation, and evaluation. The Bank further endorses:

- a) Institutional strengthening of associative-type economic organizations for production and marketing, as well as other women's groups relevant to Bank-financed projects.
- b) Community promotion.
- c) Training of female beneficiaries and technical personnel in planning, organization, distribution, and operation of services, particularly in areas crucial to women's contributions with a significant impact on them.

### **RESEARCH AND STUDIES ON THE PARTICIPATION OF WOMEN:**

Recognizing the limited availability of information and statistical data on women's involvement in economic and social development, the Bank is dedicated to supporting and encouraging the collection and publication of sex-disaggregated data and qualitative information. This support extends to research on women's actual and potential participation in productive activities, decision-making structures, and social activities, as well as mechanisms to enhance their contribution.

Knowledge about these roles and factors influencing women's abilities to fulfill these roles can significantly contribute to improving project design, enabling active women's participation, and maximizing benefits from the development process. The Bank will also engage in:

- a) Research to reassess concepts, approaches, and practices related to gathering statistics to enhance data-gathering on the role of women.
- b) Exploration of solutions to overcome obstacles hindering women's participation and strategies for promoting income and employment for low-income women.
- c) Examination of means to adapt and transfer appropriate technology to women.

Where feasible, these studies will be coordinated with and complement the initiatives of national institutions and other international organizations.

To enhance the implementation of this policy, the following section outlines specific guidelines for operational instruments and mechanisms to guide the Bank's actions in programming, analysis, administration, and evaluation of loans across key sectors. During the programming process, as the Bank formulates strategies and identifies operations in a specific country, special attention should be given to developing an informed understanding of women's roles in the economy and society. Despite limitations in baseline and disaggregated data, an early assessment of women's actual contribution to the economy and identification of key issues affecting their participation are essential for ensuring the efficiency, effectiveness, and success

## **Empowering Women for Sustainable Development: A Comprehensive Analysis of Education, Economic Inclusion, and Policy Initiatives in India**

of operations where women play a significant role. Additionally, it facilitates more effective involvement of women in specific programs and projects, advancing their progress.

### **Within programming activities, considerations should encompass:**

Addressing women's roles and identifying the institutional framework of organizations involved in women's participation, establishing linkages with the programming of Bank operations. Integrating women's participation into sector analyses and strategies within a specific country, based on the Country Partnership Program (CPP) and the socioeconomic report. Pertinent issues should also receive special consideration in general and sectoral studies.

Integrating relevant issues into orientation and preparatory documents (TWP) for Programming Missions by Inter-departmental Working Groups and addressing them in project identification processes conducted by Field Offices. Based on available information on women's participation, Bank action should primarily concentrate on areas such as water supply and sanitation, income generation, small-scale agriculture, forestry, agricultural development, education and training, health and nutrition, and other areas where women's contribution is significant. The focus is not on promoting women's activities in isolation but finding ways to enhance their participation within a given sector and effectively linking the activities of both men and women for optimal overall project benefits. In most cases, this does not necessarily involve major additional financial inputs but early identification of gender-related roles, interests, and constraints and adjusting project design accordingly.

During the project analysis stage, specific tools and steps aim to enhance the integration of gender-relevant aspects within overall operations in the specified sectors. The Bank should: Improve baseline data through gathering disaggregated data on women's roles, including a request for such information from borrowers in relevant guidelines and manuals. Prepare a set of main points for each key sector to facilitate the work of Bank staff and consultants involved in project analysis, addressing relevant issues. Consider technical cooperation and short-term missions to enhance data gathering, studies, project preparation, project design, and institutional strengthening in operations where women's participation is likely to be significant.

Make more frequent use of consultants and/or Bank missions to gather information and assist borrowers in integrating pertinent issues into project design and preparation. This includes identifying constraints, ensuring compatibility with socio cultural factors, considering women's needs in relation to project objectives, promoting active participation, and using appropriate methods for transferring technology and skills. Assess the project's potential impact on women and integrate these issues into terms of reference for missions and project documents.

Encourage the development and use of specific methodological tools to analyze and evaluate women's participation in project benefits and the project's impact on their socioeconomic situation. Use control points along the project cycle to address women's participation and the implementation of this policy. In projects involving education, training, extension, credit, and social infrastructural activities, ensure that the design and execution allow for the full participation of women. Require periodic progress reports on the increasing involvement of women from borrowers in operations where women are key beneficiaries.

Initiate a systematic program of staff training seminars and other activities at both Headquarters and Field Offices to raise staff awareness on women in development issues and acquaint them with these policy guidelines and implementation mechanisms. Designate a high-level staff

## **Empowering Women for Sustainable Development: A Comprehensive Analysis of Education, Economic Inclusion, and Policy Initiatives in India**

person within the Bank to assist staff members in better integrating women in development aspects into the project cycle and coordinate Bank efforts to implement this policy.

### **Ex-post Evaluation:**

The ex-post evaluation process is crucial for identifying factors that either contributed to or detracted from the participation of women in a project and the overall achievement of project goals. This evaluation provides valuable lessons that can enhance the effectiveness of future operations. Adequate baseline information and disaggregated data collected on an ex-ante basis are essential for accurate assessments. Criteria should be established to measure and evaluate effects within the existing frameworks and methodologies. Guidelines and criteria for ex-post evaluation in all key sectors should be revised to align with the principles outlined in this policy, incorporating improvements from the Bank's experiences in both qualitative and quantitative project evaluation methodologies.

### **General:**

Management is responsible for informing the Board of the status of policy implementation and progress achieved every two years. Actions resulting from this policy should be coordinated with those of other development organizations.

## **CONCLUSIONS:**

In rural India, women constitute approximately 84 percent of the agricultural workforce. Despite their significant contributions to farmlands, women face challenges such as lack of education, poor health status, and limited representation in farming organizations. Empowering women has a direct correlation with the economic growth of both families and the nation. Women self-help groups (SHGs) in rural areas of India play a pivotal role in improving the lives of women. The education of girls and women has been shown to promote individual and national well-being, as evidenced by strong links between women's education, employment, and income. Educated women tend to have fewer children, leading to better infant survival rates and improved overall health and education outcomes. However, gender disparities persist in educational attainment, literacy, and other metrics, particularly in the developing world.

The improvement in the status of women and girls worldwide over the past quarter-century is notable, with advancements in education, life expectancy, employment, and legal rights. Despite this progress, significant gender gaps persist, including higher mortality rates for women in many low- and middle-income countries, lower earnings and economic productivity for women globally, and limited opportunities for women to shape their lives and make decisions compared to men.

The World Bank's 2012 World Development Report emphasizes the importance of closing gender gaps for development and policymaking. Greater gender equality is seen as a driver of economic productivity, improved development outcomes for future generations, and increased representation in institutions and policies. While progress has been made, sustained and focused public action is required to address persistent gender inequalities, particularly those that have the most significant impact on welfare. Corrective policies should target root causes of inequality, considering the domestic political economy to be effective.
